

## Did Bruce Springsteen get plastic surgery?

3.22.12

**Dr. Semira Bayati** also compared photos of Bruce Springsteen from the 1980s to the present. "I feel that he has had some filling of his facial lines and his cheeks, giving him a pseudo-lift in the midface area," the Newport Beach plastic surgeon says. She adds that some photos suggest he also had Botox.

The doctor says, "The worst thing for a male is to look surgical. I think any further tampering with his face would run that risk. Maybe all he can do is a little bit of skin resection from his upper eyelids to unload the eyes a bit without the need for Botox."

Some plastic surgeons say Bruce Springsteen's hairline appears more full in recent years than it does here in a photo taken in New York in September 2007, and Dr. John Di Saia theorizes in his blog that Springsteen must have had a hair transplant. But this, too, is up for debate. **Dr. Semira Bayati of Newport Beach** doesn't think he's had hair plugs. "I do not agree with the [opinion of] hair grafting," she says, "This is a styling difference ... without much change in his frontal hairline."
